Question 1

Correct

Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  int binarySearch(int arr[], int low, int high, int target) {
4      if (high >= low) {
5          int mid = low + (high - low) / 2;
6
7          if (arr[mid] == target)
8              return mid;
9          if (arr[mid] > target)
10             return binarySearch(arr, low, mid - 1, target);
11         return binarySearch(arr, mid + 1, high, target);
12     }
13     return -1;
14 }
15
16 void findTwoElements(int arr[], int n, int x) {
17     for (int i = 0; i < n - 1; i++) {
18         int complement = x - arr[i];
19         int idx = binarySearch(arr, i + 1, n - 1, complement);
20         if (idx != -1) {
21             printf("%d\n%d\n", arr[i], arr[idx]);
22             return;
23         }
24     }
25     printf("No\n");
26 }
27
28 int main() {
29     int n, x;
30     scanf("%d", &n);
31     int arr[n];
32
33     for (int i = 0; i < n; i++) {
34         scanf("%d", &arr[i]);
35     }
36
37     scanf("%d", &x);
38
39     findTwoElements(arr, n, x);
40
41     return 0;
42 }

```

	Input	Expected	Got	
✓	4 2 4 8 10 14	4 10	4 10	✓
✓	5 2 4 6 8 10 100	No	No	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
