Question 1

Correct

Mark 1.00 out of 1.00

Given an array A of sorted integers and another non negative integer k, find if there exists 2 indices i and j such that $A[j] - A[i] = k$, $i \neq j$.

Input Format:

First Line n - Number of elements in an array

Next n Lines - N elements in the array

k - Non - Negative Integer

Output Format:

1 - If pair exists

0 - If no pair exists

Explanation for the given Sample Testcase:

YES as $5 - 1 = 4$

So Return 1.

For example:

Input	Result
3 1 3 5 4	1

Answer: (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  int countPairs(int arr[], int n, int k) {
4      int i = 0, j = 1;
5
6      while (j < n) {
7          int diff = arr[j] - arr[i];
8
9          if (diff == k && i != j) {
10             return 1; // Pair found
11         } else if (diff < k) {
12             j++; // Increase difference by m
13         } else {
14             i++; // Decrease difference by m
15         }
16
17         // Ensure pointers are not the same
18         if (i == j) {
19             j++;
20         }
21     }
22
23     return 0; // No such pair found
24 }
25
26 int main() {
27     int n, k;
28
29     scanf("%d", &n);
30
31     int arr[n];
32
33     for (int i = 0; i < n; i++) {
34         scanf("%d", &arr[i]);
35     }
36
37     scanf("%d", &k);
38
39     int result = countPairs(arr, n, k);
40     printf("%d\n", result);

```

```
41 |
42 |     return 0;
43 | }
44 |
```

	Input	Expected	Got	
✓	3 1 3 5 4	1	1	✓
